

Weak Link P20

The Weak Link helps protect pipe during installation. It is designed to yield before reaching the pipe's standard safe pull strength to protect the pipe from overload. The Weak Link P20 is designed to yield at a force of approximately 20% less than normal tensile strength of PE pipe. It is available in both yellow medium density PE pipe and black high density PE pipe.

Part Number for Medium Density	Part Number for High Density	Description
WL050-2406	WL050-3408	1/2" CTS

Add a Pulling Head and Mud Plug!

Cumberland also offers Pulling Head and Mud Plug options. The Pulling Head fuses to the Weak Link and leads the new polyethylene pipe through the trench or bore. The Mud Plug fuses to the other side of the Weak Link keeping debris out of the pipe during pull back if the Weak Link is compromised. Used together or separately, these components help protect pipe during installation.

PREVENT INJURIES

Pig Pen

When pigging, protect your team and bystanders with the Pig Pen!

The Pig Pen is designed with tuff mesh and stainless steel safety collars and cabling to safely collect foam pigs and debris that come out of the gas pipeline while pigging. Most importantly though, the Pig Pen protects those around the job site from projectiles that may otherwise be launched from the pipe end.

Features

- Versatile tool that can be used on multiple PE pipe sizes
 - Standard collars: 2", 4", 6"
 - Add-on options: 1-1/4", 3"
- Easily installs in minutes without the need for additional tools
- Corrosion resistant
 - Stainless steel safety collars and cabling
- Durable and reusable
- Compact design takes little truck space
- Collects pigs and allows you to account for what was launched
- Prevents damage to pigs and surrounding area

Part Number	Description
PPE550-744	Pig Pen with Collar Sizes for 2", 4", and 6" PE Pipe
LC420	1-1/4" Add-on Collar with Screw Clip
LC650	3" Add-on Collar with Screw Clip

Silver Bullet

Improve your company image and protect your system operations all in one simple step. The Silver Bullet, with a short piece of PE tubing, does both!

Attach the aluminum Silver Bullet to your tracer wire and install on the end of PE tubing for a weather tight seal and direct access point. A stainless steel set screw secures either 14, 12, or 10 gauge wire and the barbed insert is filled with a corrosion resistant, water displacing gel. The Silver Bullet is designed for 1/2" CTS tubing.

Part Number	Description
SB050	Silver Bullet
PE050	18" (1/2" CTS) PE Tubing

Note: Available individually, as noted above, or in packages of 100 or 300

MD-52 Meter Nut Wrench

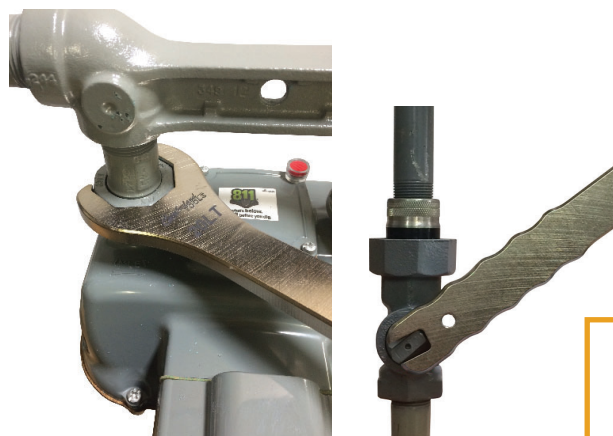

Cumberland's MD-52 Meter Nut Wrench is the toughest and most durable meter nut wrench designed. The tool is multi-purpose with a meter nut wrench and meter valve adjustment feature. The MD-52 Meter Nut Wrench is sized properly to avoid slippage and injuries.

Features

- Made from 4140 tool-grade steel
- Nickel plated
- 7 sided jaws properly sized to minimize damage to meter nuts
- Multi-purpose with a meter nut wrench and meter valve adjustment feature

Part Number	Description
MNW10	Used with 10 LT Meter Connection Spud
MNW1A	Used with 1A LT Meter Connection Spud
MNW20	Used with 20 LT Meter Connection Spud
MNW30	Used with 30 LT Meter Connection Spud
MNW45	Used with 45 LT Meter Connection Spud
MNW4A	Used with 4A LT Meter Connection Spud
MNW20x30	Dual sided. Used with 20 LT and 30 LT Meter Connection Spud

Pipe Wrench Assist

The Pipe Wrench Assist helps prevent injuries and minimize lost time due to accidents by requiring less force to turn an object during the wrenching process. The leveraging advantage coupled with the tool's features make it the safest "cheater bar" available.

Features

- Cast aluminum will yield if overstressed
- Tool is secured to the wrench by a Safety D-Ring which prevents rotating or detaching
- Available in either padded, knurled anti-slip, or PVC dipped handle
- Fits most wrenches

Padded Handle Part Number	Knurled Handle Part Number	PVC Dipped Handle Part Number	Wrench Size
PWA14	PWA14KE	PWA14PVC	14"
PWA18	PWA18KE	PWA18PVC	18"
PWA24	PWA24KE	PWA24PVC	24"
PWA36	PWA36KE	PWA36PVC	36"
PWA48	PWA48KE	PWA48PVC	48"

EASY VALVE ACCESS **Beyer Box**

Over time, you run into buried meter set valves, inaccessible valves, and bare steel piping without cathodic protection. The Beyer Box offers a simple solution to those valve problems.

Features

- Establishes and protects access to the meter set valve
- Eliminates the high cost to raise the service line and riser
- Installation is simple and fast, a one person job
- Minimizes disturbance to existing landscape
- Establishes a safe installation with access to valve and no need for cathodic protection or anodeless riser service
- Optional cover to offer long-term protection

EASILY LOCATE UTILITIES & PREVENT DAMAGE

Tee'd Up Marker

The Tee'd Up Marker is an economical tool designed to give excavating operators early notice of buried utilities. The locating magnet, inside the top of the marker, makes it easy to identify the marker's location above ground with a standard metal locator. When digging, the flag gives warning to the excavator that pipe is close avoiding costly damage to utilities.

Marker Features

- Extremely simple to install
- Modular design accommodates multiple applications (PE / steel / PVC pipes and fittings)
- Embedded magnet allows easy identification of utilities from above ground
- Buried flag provides a first alert notification that utilities are close

Part Number	Description
TMST-ST	Direct Pipe Application Kit Kit includes 6" x 6" adhesive pad (TapeCoat), peg base, 2' of 1/2" CTS pipe, caution decals, and XT magnet.
TMTT-PC	Tap Tee Application Kit Kit includes cap cover to fit tap tees (Performance /GF), peg base, 2' of 1/2" CTS pipe, caution decals, and XT magnet.
TMHV-C	High Volume Tap Tee Application Kit Kit includes cap cover to fit high volume tap tees (Performance /GF), peg base, 2' of 1/2" CTS pipe, caution decals, and XT magnet.
TM01-3M	Peg Base Kit Kit includes peg base with 3M adhesive, 2' of 1/2" CTS pipe, caution decals, and XT magnet.
